WORK EXPERIENCE

Chanz IT Business Solutions

Pasig City, Philippines

Junior Web Developer

Feb 2022 – Mar 2024

- Contributed to multiple projects across diverse tech stacks, ensuring scalability and maintainability.
- Developed e-commerce platforms with multitenancy support for improved scalability.
- Implemented real-time connections in Laravel using WebSockets to deliver notifications to multiple users.
- Built Laravel projects from scratch following best practices for architecture and performance.
- Worked extensively with WordPress and Elementor to create and customize websites.
- Implemented AI-driven suggestions for SEO fields to enhance content optimization.
- Created custom plugins and extensions for CKEditor to meet specific client requirements.
- Backend: Laravel, Yii, CodeIgniter, WordPress; Frontend: Vue, Livewire, Vanilla JavaScript, jQuery.
- Optimized and modernized legacy systems to boost performance and maintainability.

U+ Realty

Pasig City, Philippines

System Administrator, Junior Web Developer

Aug 2019 – Aug 2022

- Developed and maintained a real estate platform built with ASP.NET Core.
- Maintained and enhanced Spring Boot APIs for legacy business websites in China.

St. Agnes Academy of Caloocan City

Caloocan City, Philippines

Information Technology Instructor

Mar 2017 – Mar 2019

- Designed and maintained the school's websites and networking infrastructure using Linux.
- Conducted programming classes (C#, PHP, CSS, JavaScript, Unity) for Senior High School students.
- Mentored students in building web applications and games as capstone projects.

WORK EXPOSURE

Our Lady of Lourdes School

Caloocan City, Philippines

Web Developer

Jan 2017 – Jul 2017

- Developed the school's enrollment and accounting systems.
- Conducted a seminar on game development and Laravel PHP for senior high school students.

Bureau of Internal Revenue (BIR) - Quezon City

Philippines

IT Support Intern

2016 (2 months)

- Performed hardware troubleshooting including printer repair and computer maintenance.
- Installed and configured Java-based applications and other required software.

Zenshin Systems Corporation

Philippines

Technical Assistant (OJT)

2016

- Formatted and installed Windows operating systems on client computers.
- Prepared and packaged computer units and servers for delivery to large clients such as SM and Aboitiz.

Databases: PostgreSQL, MySQL, MariaDB

Libraries: React, jQuery

CMS/Platforms: CraftCMS, WordPress, PayloadCMS

Styling: CSS, TailwindCSS

Tools: Neovim, Git

CI/CD: GitHub Actions

Cloud: Firebase, AWS (Lightsail, S3, SES, CloudFront)

Technologies: Linux, Docker

Testing Frameworks: PHPUnit, Pest, k6, Playwright, Dusk

Web Technologies: REST API, WebSockets

PROJECTS

St. Agnes Academy of Caloocan City

2017–2019

Information Technology Instructor / Developer

Caloocan City, Philippines

- Web-Based Grading System – ASP.NET MVC + MS SQL Server. I proposed and developed this system to help teachers record student profiles and grades more efficiently, replacing manual processes and reducing errors.
- Enrollment System – Laravel + PHP. I digitized the school's enrollment process to solve issues with manual registration, improving speed and accuracy.

U+ Realty

2019–2021

System Administrator / Developer

Pasig City, Philippines

- CRM & Real Estate Listings – C# ASP.NET MVC, .NET Core, WPF, Spring Boot. I researched and selected these technologies for their scalability and demand in the market, building both desktop and web versions that shared one database.
- E-learning Platform – React.js + Spring Boot. I single-handedly coded the entire platform to meet the surge in online learning demand during the pandemic, implementing a full-stack solution from scratch.

Chanz IT Business Solutions

2022–2024

Junior Web Developer

Pasig City, Philippines

- Electrical Inspection Site – WordPress + Elementor. My first project at the company; I was given full freedom to choose the tech stack and delivered the site in 2 days, customizing forms with Gravity Forms to match client needs.
- AI Tools Search Engine – Laravel + Vue.js. Despite being new to Laravel and Vue, I learned both quickly via Laracasts and YouTube, building a dynamic filter system where filter states react to each other and disable when unavailable.
- Poker Blog – Laravel + Backpack. I built the admin panel, integrated real-time reporting via Soketi, and implemented unit and feature tests to ensure stability.
- Filipino Art E-commerce – Laravel + Vue (Bagisto). Tasked with upgrading from Laravel 5 to 9 on an unmaintained site, I resolved N+1 query issues, optimized image handling, and improved VPS performance, cutting load time from 4s to 1–2s.
- CompanyPass – Laravel + Vue (Bagisto, Multitenant). Following my success with Filipino Art, I was assigned to upgrade and optimize this Netherlands-based platform supporting 70+ tenants. I improved performance from 0.5s+ load time by optimizing images, refining queries, and ensuring smooth handling of multiple concurrent users.
- ITHEC – CraftCMS + Yii PHP Framework. My PM tasked me with speeding up the site. I identified the bottleneck (full page refresh after each answer) and replaced it with AJAX updates, while also optimizing queries and upgrading the system.
- IndoorCare – Air Quality Monitoring Platform. I developed the entire admin side, allowing management of clients, devices, parameters, notifications, and payments, integrating multiple air quality devices into a single unified dashboard.

FREELANCE & INDEPENDENT PROJECTS

urpuppy.com

2024 – Present

Laravel, Filament, React.js, PostgreSQL

Remote

- Developed full-stack pet marketplace with Stripe payments and SEO optimization.
- Implemented clean architecture with Eloquent ORM for maintainability.

racknroad.com

2024

WordPress

Remote

- Optimized homepage layout and site speed by removing unused plugins and converting images to WebP.

solcabinets.com

2024

WordPress, Elementor, WooCommerce

Remote

- Built furniture showcase site in 2 days with fast loading times and responsive design.

kewlor.com

2024

Laravel

Remote

- Fixed homepage layout and added functional contact form.

calendar.kewlor.com

2024

Spring Boot, React.js, PostgreSQL

Remote

- Developed cross-platform calendar with API for web and desktop using separate frontends.
